

## ANTIMICROBIAL SYSTEMS

Falcon Trunking are pleased to announce the addition of an **Antimicrobial Option** to its product range.

By incorporating SteriTouch® silver ion technology a built in protection is provided against a range of harmful bacteria, moulds and fungi. Due to the active ingredient being fully incorporated into the finished product protection is not reduced even if the surface becomes damaged.

**SteriTouch®** is particularly effective against illness causing bacteria such as:

**Methicillin Resistant Staphylococcus Aureus (MRSA)**  
**E-Coli**  
**Salmonella**

### Applications

Target applications for these products are predominantly hospitals, care homes, schools, laboratories, wash rooms and food preparation areas.

### Testing

Confidence in the accuracy of results is important in any testing regime, particularly when evaluating antimicrobial performance. Only established independent laboratories specialising in antimicrobial testing are used, ensuring consistent repeatable results. All products have been tested according to the internationally recognised ISO 22196:2007 and JIS Z 2801:2000 standards and results can be incorporated into comprehensive reports which include test data and certificates. This information is available on request.

Specific testing against most harmful organisms is available; please contact us for more information.
